Innovations in Refinishing

For nearly 200 years, the most innovative paints in Europe have been produced by one company. Sikkens' Products have been continually researched, tested and improved to maintain unparalleled levels of color, shine and durability.

And now, the Sikkens System technique for Automotive Refinishing has come to America.

It begins with our basecoat/clearcoat acrylic urethane enamel finishes. No other automotive paint can match Sikkens' Autocryl or Autobase finish for color, shine or gloss retention.

But the Sikkens System goes deeper to the primer. To the filler.

To the world's most advanced color matching and mixing system—the Sikkens Carousell™. With the Carousell™ over 12,000 colors can be easily formulated to match almost any original color.

Find out more about the most innovative, technologically advanced automotive refinishing system available in America. Contact Sikkens today.
